

WEEK 20 PROJECT — DATA FAIRNESS REFLECTION

1. Basis for judging under-representation

I judged representation by comparing both the number of registered members and the number of checkouts for each neighborhood. A neighborhood with substantially fewer members and fewer checkouts than the others can be considered potentially under-represented.

2. Finding

Shubra appears to be the most under-represented neighborhood in the cleaned dataset. It has 5 registered members and 34 checkouts, compared with higher member and checkout counts for Maadi, Nasr City, Heliopolis, and Zamalek.

3. Plausible reason

One plausible reason is that fewer students from Shubra may have registered for the library program or participated in the reading activities during the period covered by the data.

4. Reasonable next step

The library could increase outreach in Shubra next summer, for example by promoting registration and reading activities through local schools and community organizations, then comparing participation again.
